

The Tinnitus Clinic Acoustic CR[®] Neuromodulation

Professor Jane Mellor

Acoustic CR[®] Neuromodulation

“As I went every four weeks or two weeks or whatever, I began to realise that the tinnitus was actually changing and that the treatment was working. My sleep is definitely much better ... and I noticed that this changed the most and changed the fastest... and I got back the ability to sit quietly and read.”

Barry Parker

Acoustic CR[®] Neuromodulation

“The Clinic was fantastic. It has been a fabulous treatment and I’m over the moon. I actually stopped wearing the device about seven months ago. I feel like I don’t need it any more. I think it’s done the trick.”

Nathan Bushay

Acoustic CR[®] Neuromodulation

“I’d definitely tell other people to go for it. It definitely helps. I know you can do relaxation and stuff but it doesn’t actually solve the problem, like the device does.”

Robert Stanley

Acoustic CR[®] Neuromodulation

“When I get up in the morning the tinnitus is in the background and I am rarely aware of it during the day. Before, I was constantly aware of the tinnitus. At this point, today, I would say my tinnitus is 80% better than it was.”

Elizabeth Spencer

Acoustic CR[®] Neuromodulation

“This treatment has been a positive and worthwhile experience, helping me to lead a normal life. I would definitely advise other people with tinnitus to contact The Tinnitus Clinic.”
